FAQ's Related to Treatments

PROCTOLOGY (Piles, Fissure, Fistula, Pilonidal)

1. **What are piles (hemorrhoids)?**
   Piles are swollen vascular cushions inside or around the anal canal that can cause bleeding, pain, and swelling.
2. **What causes piles?**
   Chronic constipation, straining during stool, prolonged sitting, pregnancy, obesity, and low-fiber diet.
3. **Is bleeding during stool always piles?**
   No. Bleeding can also be due to fissure, fistula, polyps, or colorectal disease. Proper evaluation is necessary.
4. **How are piles diagnosed?**
   Through physical examination, digital rectal exam, and proctoscopy.
5. **What are the different grades of piles?**
   Grade 1 (bleeding only) to Grade 4 (permanent prolapse).
6. **Can piles heal without surgery?**
   Early-stage piles can improve with medicines, diet, and lifestyle changes.
7. **What foods should I avoid in piles?**
   Low-fiber foods, junk food, processed food, and excessive spicy food.
8. **Does spicy food cause piles?**
   It does not directly cause piles but may worsen symptoms.
9. **Is laser treatment safe for piles?**
   Yes, laser is safe, minimally invasive, and reduces pain and recovery time.
10. **How long does piles surgery take?**
    Usually 20–40 minutes.
11. **Is piles surgery painful?**
    Laser procedures cause minimal discomfort compared to open surgery.
12. **How many days rest is needed after piles surgery?**
    Most patients resume routine work within 3–5 days.
13. **Can piles come back after surgery?**
    Recurrence is rare if lifestyle changes are maintained.
14. **What is stapler surgery for piles?**
    A technique that removes excess prolapsed tissue using a circular stapling device.
15. **What is the difference between laser and open surgery?**
    Laser involves minimal cuts and faster healing; open surgery has longer recovery.
16. **Is piles common during pregnancy?**
    Yes, due to increased abdominal pressure.
17. **Can sitting for long hours cause piles?**
    Prolonged sitting can worsen symptoms.
18. **Does constipation worsen piles?**
    Yes, straining increases pressure in anal veins.
19. **Are external piles more painful?**
    Yes, because they have pain-sensitive nerve supply.
20. **When should I see a doctor for piles?**
    If bleeding, severe pain, or prolapse occurs.
21. **What is an anal fissure?**
    A small tear in the lining of the anal canal.
22. **What causes fissure?**
    Hard stool, constipation, childbirth, chronic diarrhea.
23. **Why is fissure pain severe?**
    Due to exposure of nerve endings in the anal lining.
24. **Can fissure heal with medicines?**
    Acute fissures often heal with medication and stool softeners.

25. **What is laser fissure surgery?**
    A minimally invasive procedure to relax the anal muscle and promote healing.
26. **What is lateral internal sphincterotomy?**
    A minor surgical procedure that reduces anal muscle spasm.
27. **Is fissure surgery permanent?**
    Yes, success rate is very high.
28. **How long does fissure recovery take?**
    Usually 5–7 days for routine activity.
29. **What is an anal fistula?**
    An abnormal tunnel between the anal canal and skin.
30. **How does fistula develop?**
    Due to infection of anal glands.
31. **Is fistula dangerous?**
    It can cause repeated infection if untreated.
32. **Can fistula heal without surgery?**
    Usually no; surgery is required.
33. **What is laser fistula treatment (FiLaC)?**
    Laser closure of the fistula tract without major cuts.
34. **What is VAAFT procedure?**
    Video-assisted technique to treat fistula internally.
35. **What is the recurrence rate of fistula?**
    Low when treated properly with advanced techniques.
36. **How long is hospital stay for fistula surgery?**
    Often same-day or 24 hours.
37. **What is pilonidal sinus?**
    A sinus tract near the tailbone containing hair and debris.
38. **What causes pilonidal sinus?**
    Ingrown hair and infection.
39. **Is pilonidal sinus common in young males?**
    Yes, especially those who sit long hours.
40. **What is laser treatment for pilonidal sinus?**
    Laser destroys the infected tract with minimal incision.
41. **Is pilonidal surgery permanent?**
    Yes, if completely treated.
42. **How soon can I sit after surgery?**
    Usually within 1–2 days depending on procedure.
43. **Are these procedures covered under insurance?**
    Most are covered, subject to policy terms.
44. **Is same-day discharge possible?**
    Yes, in most laser cases.
45. **Can I travel after surgery?**
    Short travel is usually possible within a few days.
46. **What precautions should I follow after surgery?**
    High-fiber diet, hydration, hygiene, avoid straining.
47. **What complications can occur if untreated?**
    Chronic pain, infection, bleeding, anemia.
48. **Can these conditions cause anemia?**
    Chronic bleeding piles can lead to anemia.
49. **Is surgery done under local or spinal anesthesia?**
    Usually spinal or short general anesthesia.
50. **How do I book consultation at O Positive Health?**
    Call 8448534103 or visit www.opositivehealth.com.

LAPAROSCOPIC SURGERY

1. **What is laparoscopic surgery?**
   It is a minimally invasive surgical technique performed using small incisions and a camera (laparoscope).
2. **How is laparoscopic surgery different from open surgery?**
   Laparoscopy uses small cuts, causes less pain, and allows faster recovery compared to larger open incisions.
3. **Is laparoscopic surgery safe?**
   Yes, it is widely practiced and considered very safe when performed by experienced surgeons.
4. **What are the advantages of minimally invasive surgery?**
   Less pain, minimal scars, shorter hospital stay, and quicker return to routine life.
5. **How long does laparoscopic surgery take?**
   Usually 30 minutes to 2 hours depending on the procedure.
6. **Is general anesthesia required?**
   Most laparoscopic surgeries are performed under general anesthesia.
7. **How many stitches are needed in laparoscopy?**
   Typically 2–4 small stitches.
8. **Is laparoscopic surgery painful?**
   Pain is usually mild and manageable with medication.
9. **How many days rest is required after laparoscopy?**
   Most patients resume normal activities within 3–7 days.
10. **Can laparoscopic surgery fail?**
    Rarely, but sometimes conversion to open surgery may be needed for safety.
11. **What is a hernia?**
    A hernia is a bulge caused by weakness in the abdominal wall.
12. **What causes hernia?**
    Heavy lifting, chronic cough, obesity, pregnancy, or muscle weakness.
13. **Is hernia dangerous if untreated?**
    Yes, it can lead to obstruction or strangulation of intestine.
14. **Can hernia heal without surgery?**
    No, surgery is the only permanent solution.
15. **What is laparoscopic hernia repair?**
    A procedure where mesh is placed through small incisions to strengthen the abdominal wall.
16. **Is mesh used in hernia surgery?**
    Yes, mesh reinforces the weak area and reduces recurrence.
17. **Is hernia surgery permanent?**
    Yes, recurrence is low with proper repair.
18. **How long is hospital stay for hernia surgery?**
    Usually same-day discharge or 24 hours.
19. **What is gallstone disease?**
    Formation of stones inside the gallbladder.
20. **What causes gallstones?**
    Cholesterol imbalance, obesity, rapid weight loss, or genetics.
21. **Do all gallstones require surgery?**
    No, only symptomatic stones need removal.
22. **What are symptoms of gallstones?**
    Upper abdominal pain, nausea, vomiting, bloating.
23. **What is laparoscopic cholecystectomy?**
    Removal of the gallbladder using laparoscopic technique.
24. **Can gallstones come back after surgery?**
    No, because the gallbladder is removed.
25. **Is gallbladder removal safe?**
    Yes, people live normally without a gallbladder.

26. **What is appendicitis?**
    Inflammation of the appendix.
27. **What are symptoms of appendix infection?**
    Right lower abdominal pain, fever, nausea.
28. **Is appendix surgery an emergency?**
    Yes, untreated appendix can rupture.
29. **What is laparoscopic appendectomy?**
    Removal of appendix through small incisions.
30. **How long does appendix recovery take?**
    Most patients recover in 1–2 weeks.
31. **What is hydrocele?**
    Fluid collection around the testicle.
32. **What causes hydrocele?**
    Injury, infection, or inflammation.
33. **Is hydrocele painful?**
    Usually painless but may cause swelling discomfort.
34. **Can hydrocele resolve on its own?**
    In adults, surgery is often required.
35. **What is hydrocelectomy?**
    Surgical removal of hydrocele fluid sac.
36. **Is hydrocele surgery done under local or general anesthesia?**
    Usually spinal or short general anesthesia.
37. **When can I return to work after laparoscopic surgery?**
    Within 5–7 days depending on procedure.
38. **Can I exercise after laparoscopy?**
    Light activity after a week; heavy lifting after 4–6 weeks.
39. **Are laparoscopic surgeries covered under insurance?**
    Yes, most are covered under health insurance policies.
40. **Is same-day discharge possible?**
    Yes, in most uncomplicated cases.
41. **What are possible complications of laparoscopy?**
    Bleeding, infection, anesthesia-related risks, though uncommon.
42. **Can obesity affect laparoscopic surgery?**
    Yes, but laparoscopy is often preferred in obese patients.
43. **Is laparoscopy safe for elderly patients?**
    Yes, after proper medical evaluation.
44. **Can hernia recur after repair?**
    Recurrence is rare with mesh repair.
45. **What precautions should be taken after surgery?**
    Avoid heavy lifting, maintain hygiene, follow medication advice.
46. **When can I start normal diet?**
    Usually within 24 hours unless advised otherwise.
47. **Will there be visible scars?**
    Scars are very small and fade over time.
48. **How soon can I travel after surgery?**
    Short travel after a few days if comfortable.
49. **Is pre-surgery fitness test required?**
    Yes, blood tests and basic cardiac evaluation are usually done.
50. **How can I book laparoscopic consultation at O Positive Health?**
    Call 8448534103 or visit www.opositivehealth.com.

UROLOGY

1. **What are kidney stones?**
   Kidney stones are hard mineral deposits formed inside the kidneys.
2. **What causes kidney stones?**
   Low water intake, high salt diet, metabolic imbalance, and genetics.
3. **What are symptoms of kidney stones?**
   Severe back pain, burning urination, blood in urine, nausea.
4. **Can small kidney stones pass naturally?**
   Yes, small stones may pass with hydration and medicines.
5. **When is surgery required for kidney stones?**
   If the stone is large, painful, blocked, or not passing.
6. **What is laser lithotripsy?**
   A laser procedure that breaks stones into small fragments for removal.
7. **What is RIRS?**
   Retrograde Intrarenal Surgery using a flexible scope and laser to treat kidney stones.
8. **What is PCNL?**
   Percutaneous Nephrolithotomy, used for large kidney stones.
9. **Is kidney stone surgery painful?**
   Modern techniques cause minimal discomfort.
10. **Can kidney stones come back?**
    Yes, if diet and hydration are not managed.
11. **What is phimosis?**
    A condition where the foreskin cannot be pulled back over the glans.
12. **What causes phimosis?**
    Infection, poor hygiene, diabetes, or scarring.
13. **Is phimosis dangerous?**
    It can cause pain, infection, and difficulty in urination.
14. **Can phimosis be treated without surgery?**
    Mild cases may improve with creams, but severe cases require surgery.
15. **What is laser circumcision?**
    A minimally invasive removal of foreskin using laser technology.
16. **Is circumcision painful?**
    Laser technique minimizes pain and bleeding.
17. **How long does circumcision recovery take?**
    Usually 7–10 days.
18. **What is varicocele?**
    Enlarged veins in the scrotum.
19. **What causes varicocele?**
    Valve malfunction in scrotal veins.
20. **Can varicocele affect fertility?**
    Yes, it may reduce sperm quality.
21. **What is varicocele surgery?**
    Microsurgical procedure to tie off enlarged veins.
22. **Is varicocele surgery safe?**
    Yes, when performed by experienced surgeons.
23. **How long is hospital stay for varicocele surgery?**
    Usually same day discharge.
24. **What is hydrocele?**
    Fluid accumulation around the testicle.
25. **What are symptoms of hydrocele?**
    Painless swelling in scrotum.

26. **Is hydrocele dangerous?**
    Usually not dangerous but may require treatment.
27. **What is TURP surgery?**
    Transurethral Resection of Prostate for enlarged prostate.
28. **What are symptoms of enlarged prostate?**
    Frequent urination, weak urine flow, incomplete emptying.
29. **Is prostate enlargement common in elderly men?**
    Yes, especially after age 50.
30. **Can prostate problems be treated without surgery?**
    Early stages can be managed with medication.
31. **Is laser prostate surgery available?**
    Yes, laser TURP is a minimally invasive option.
32. **What is UTI?**
    Urinary tract infection caused by bacteria.
33. **What are symptoms of UTI?**
    Burning urination, frequent urination, lower abdominal pain.
34. **Can UTI resolve with antibiotics?**
    Yes, most UTIs respond to antibiotics.
35. **Can kidney infection be serious?**
    Yes, if untreated it can damage kidneys.
36. **What is urethral stricture?**
    Narrowing of the urethra causing urine blockage.
37. **How is urethral stricture treated?**
    Endoscopic surgery or dilation.
38. **Is urology surgery covered under insurance?**
    Yes, most major procedures are covered.
39. **How long does kidney stone surgery take?**
    Usually 30–90 minutes.
40. **When can I resume work after urology surgery?**
    Within 3–7 days depending on procedure.
41. **Is general anesthesia required?**
    Most advanced procedures require short general anesthesia.
42. **Can diabetes affect urological health?**
    Yes, it increases risk of infection and sexual dysfunction.
43. **Can kidney stones cause kidney damage?**
    Yes, if blockage persists.
44. **What tests are required before surgery?**
    Blood tests, urine tests, ultrasound, CT scan if needed.
45. **Is same-day discharge possible?**
    Yes, in most minimally invasive procedures.
46. **Will there be visible scars?**
    Laser and endoscopic procedures usually leave minimal or no scars.
47. **Can I travel after surgery?**
    Usually within a few days after doctor approval.
48. **What precautions should I follow after kidney stone surgery?**
    Drink plenty of water and follow diet advice.
49. **Can urological problems affect sexual life?**
    Some conditions may, but treatment usually improves function.
50. **How can I book urology consultation at O Positive Health?**
    Call 8448534103 or visit www.opositivehealth.com.

51. What is Urology?

Urology is the medical specialty that treats urinary tract problems in men and women, and male reproductive system disorders.

52. Who is a Urologist?
A doctor trained to treat kidney, bladder, prostate, and male reproductive conditions.
53. What is Laser stone surgery?
A minimally invasive procedure to break stones using laser.
54. What is Prostate?
A gland in men located below the bladder.
55. What is Enlarged prostate (BPH)?
Non-cancerous increase in prostate size causing urinary problems.
56. What are symptoms of Enlarged prostate?
Weak urine flow, frequent urination, difficulty starting urine.
57. How is Enlarged prostate treated?
Medicines or minimally invasive surgery.
58. What is Prostate cancer?
Cancer that develops in prostate gland.
59. Are UTIs common in women?
Yes, more common in women.
60. What is Bladder stone?
Stone formed inside bladder.
61. What is Male infertility?
Inability to father a child.
62. What causes Male infertility?
Low sperm count, hormonal imbalance, blockage.
63. What is Erectile dysfunction?
Inability to maintain erection.
64. Is Erectile dysfunction treatable?
Yes, with medicines or therapy.
65. Is Laser circumcision better?
It may cause less bleeding and faster recovery.
66. What is Urinary incontinence?
Loss of bladder control.
67. What is Cystoscopy?
Camera test to examine bladder.
68. How to prevent kidney stones?
Drink more water, reduce salt intake.
69. What is Blood in urine?
Called Hematuria; needs evaluation.
70. What is Overactive bladder?
Sudden urge to urinate frequently.
71. What is Testicular torsion?
Twisting of testicle cutting blood supply.
72. Is Testicular torsion emergency?
Yes, immediate surgery required.
73. What is Peyronie's disease?
Curvature of penis due to scar tissue.
74. Can urinary problems indicate diabetes?
Yes, frequent urination can be a symptom.
75. What is Kidney infection?
Infection spreading to kidneys.
76. Can children have urology issues?
Yes, like bedwetting or undescended testicle.
77. What is Undescended testicle?
Testicle not moving into scrotum at birth.
78. What is PSA test?

Blood test to check prostate health.

79. Is Urology surgery safe?
Yes, when performed by specialists.

80. What is minimally invasive urology?
Procedures done with small cuts or natural openings.

81. How long is recovery after urology surgery?
Usually few days to two weeks.

82. When should I see a Urologist?
Persistent urinary symptoms, pain, blood in urine.

83. Can urinary problems be serious?
Yes, if untreated.

84. Are kidney problems preventable?
Healthy lifestyle reduces risk.

85. Is male infertility common?
Yes, affects many couples.

86. Can most urology problems be treated successfully?
Yes, with early diagnosis.

GENERAL SURGERY

1. What is General Surgery?
General surgery deals with common abdominal and soft tissue conditions that require surgical treatment.

2. What conditions are treated in General Surgery?
Hernia, gallbladder stones, appendix, piles, fissure, fistula, breast lumps, thyroid issues, and more.

3. What is Hernia?
A hernia occurs when an internal organ pushes through a weak muscle wall.

4. What are symptoms of Hernia?
Swelling, pain while coughing, lifting, or standing.

5. How is Hernia treated?
Only surgery can permanently repair a hernia.

6. Is Hernia surgery safe?
Yes, it is a common and safe procedure.

7. What is Laparoscopic surgery?
Minimally invasive surgery done through small cuts using a camera.

8. What is the benefit of Laparoscopic surgery?
Less pain, smaller scars, faster recovery.

9. What is Gallbladder Stone?
Hard deposits formed inside the gallbladder.

10. What are symptoms of Gallstones?
Severe right-side abdominal pain, nausea, vomiting.

11. How are Gallstones treated?
Removal of the gallbladder (Cholecystectomy).

12. Can gallstones dissolve with medicines?
Usually no. Surgery is the permanent solution.

13. What is Appendix?
A small tube-like organ attached to the intestine.

14. What is Appendicitis?
Inflammation of the appendix causing severe pain.

15. Is Appendicitis an emergency?
Yes, it requires urgent surgery.

16. What are Piles?
Swollen veins in the rectal area.

17. What causes Piles?

Constipation, pregnancy, prolonged sitting.

18. How are Piles treated?
Medicines, laser treatment, or surgery depending on stage.

19. What is Fissure?
A small tear in the anal area causing pain during stool.

20. What is Fistula?
An abnormal tunnel between anal canal and skin.

21. Does Fistula require surgery?
Yes, surgery is usually required.

22. What is Thyroid surgery?
Removal of part or all of thyroid gland.

23. When is Thyroid surgery needed?
Large nodules, cancer suspicion, or severe hyperthyroidism.

24. What is Breast Lump?
A swelling in breast tissue.

25. Are all Breast lumps cancer?
No, many are benign.

26. What is Abscess?
Collection of pus due to infection.

27. How is Abscess treated?
Drainage and antibiotics.

28. What is Hydrocele?
Fluid accumulation around the testicle.

29. Does Hydrocele need surgery?
Yes, if large or uncomfortable.

30. What is Varicocele?
Enlarged veins in the scrotum.

31. Can Varicocele cause infertility?
Yes, in some cases.

32. What is Lipoma removal?
Minor surgery to remove fatty lump.

33. What is Minimally Invasive Surgery?
Surgery done with small incisions and faster recovery.

34. How long is recovery after abdominal surgery?
Usually 1–2 weeks depending on procedure.

35. Is General anesthesia safe?
Yes, when given by trained anesthetist.

36. How long does surgery take?
30 minutes to 2 hours depending on complexity.

37. When can I eat after surgery?
Usually within 6–24 hours depending on surgery type.

38. What are surgical risks?
Bleeding, infection, anesthesia reactions (rare).

39. What is Post-operative care?
Wound care, medicines, diet control, follow-up.

40. Can surgery be done in daycare?
Yes, many procedures are same-day discharge.

41. What is Incisional hernia?
Hernia occurring at previous surgical scar site.

42. Can Hernia come back?
Rarely, but possible if not properly repaired.

43. What is Surgical mesh?
A medical material used to strengthen hernia repair.

44. What diet is recommended after surgery?
Light, soft, easily digestible food initially.
45. When can I return to work?
Usually 7–14 days.
46. Is pain severe after surgery?
Pain is controlled with medication.
47. Can elderly patients undergo surgery?
Yes, if medically fit.
48. What is Laser surgery?
Procedure using laser technology for precision and less bleeding.
49. What are stitches?
Threads used to close surgical wounds.
50. How important is follow-up after surgery?
Very important to monitor healing and prevent complications.

ENT (Ear, Nose & Throat)

1. What is ENT?
ENT is the medical specialty that treats ear, nose, and throat problems.
2. Who is an ENT specialist?
A doctor trained to treat infections, allergies, hearing problems, and sinus conditions.
3. What is Sinusitis?
Inflammation or infection of the sinus cavities.
4. What are symptoms of Sinusitis?
Headache, facial pain, blocked nose, thick nasal discharge.
5. How is Sinusitis treated?
Medicines, steam inhalation, or surgery in severe cases.
6. What is Septoplasty?
Surgery to correct a deviated nasal septum.
7. What is DNS (Deviated Nasal Septum)?
When the nasal wall is crooked, causing breathing difficulty.
8. Is Septoplasty painful?
Mild discomfort; pain is usually manageable.
9. What are Tonsils?
Two small glands at the back of the throat.
10. What is Tonsillitis?
Infection of the tonsils causing throat pain and fever.
11. When is Tonsil surgery needed?
If infections are frequent or severe.
12. What is Adenoid?
Tissue behind the nose, common in children.
13. When are Adenoids removed?
If they cause breathing or ear problems.
14. What is Ear infection?
Infection in outer, middle, or inner ear.
15. What are symptoms of Ear infection?
Ear pain, fever, hearing difficulty.
16. Can Ear infections cause hearing loss?
Yes, if untreated.
17. What is Hearing loss?
Reduced ability to hear sounds.
18. What causes Hearing loss?
Infection, aging, loud noise exposure.

19. What is Hearing aid?
A device that helps improve hearing.
20. What is Vertigo?
Feeling of spinning or dizziness.
21. What causes Vertigo?
Inner ear problems or nerve issues.
22. What is Tinnitus?
Ringing or buzzing sound in ears.
23. Can Tinnitus be treated?
It can be managed but may not always be cured.
24. What is Nasal polyp?
Soft growth inside the nose due to chronic inflammation.
25. Does Nasal polyp need surgery?
If large or not responding to medicines.
26. What is Laryngitis?
Inflammation of voice box causing hoarseness.
27. What causes Hoarseness?
Infection, voice strain, smoking.
28. What is Sleep Apnea?
Condition where breathing stops briefly during sleep.
29. What are symptoms of Sleep Apnea?
Snoring, daytime sleepiness, morning headaches.
30. Can ENT treat snoring?
Yes, depending on the cause.
31. What is Ear wax?
Natural substance protecting the ear canal.
32. Should Ear wax be removed?
Only if causing blockage or discomfort.
33. What is Ear drum?
Thin membrane separating outer and middle ear.
34. Can Ear drum rupture?
Yes, due to infection or injury.
35. Is Ear drum repair possible?
Yes, through surgery called Tympanoplasty.
36. What is FESS?
Functional Endoscopic Sinus Surgery for chronic sinusitis.
37. Is FESS safe?
Yes, it is minimally invasive and safe.
38. How long is recovery after ENT surgery?
Usually 5–10 days.
39. What is Throat cancer?
Abnormal growth in throat tissues.
40. What are early signs of throat cancer?
Persistent hoarseness, difficulty swallowing.
41. What is Nasal allergy?
Allergic reaction causing sneezing and runny nose.
42. How is Nasal allergy treated?
Antihistamines, nasal sprays, avoiding triggers.
43. Can children get ENT problems?
Yes, very commonly.
44. What is Glue ear?
Fluid accumulation behind ear drum in children.
45. Does Glue ear need surgery?

Sometimes small tubes are inserted.
46. What is Voice therapy?
Training to improve voice problems.
47. Is surgery always required in ENT?
No, many conditions are treated with medicines.
48. When should I see an ENT doctor?
Persistent pain, hearing loss, blocked nose, throat issues.
49. Are ENT surgeries safe?
Yes, when performed by experienced specialists.
50. Can most ENT problems be treated successfully?
Yes, early diagnosis improves success rate.

ORTHOPEDICS

1. What is Orthopedics?
Orthopedics is the medical specialty that treats bone, joint, muscle, and ligament problems.
2. Who is an Orthopedic surgeon?
A doctor trained to treat fractures, joint problems, sports injuries, and spine conditions.
3. What is a Fracture?
A fracture is a broken bone.
4. What are symptoms of a fracture?
Pain, swelling, deformity, and difficulty moving the affected area.
5. How are fractures treated?
With plaster (cast), splint, or surgery depending on severity.
6. What is Joint replacement?
Surgery where a damaged joint is replaced with an artificial implant.
7. What is Knee replacement?
Replacing a worn-out knee joint with an artificial one.
8. Who needs Knee replacement?
Patients with severe arthritis and constant knee pain.
9. What is Hip replacement?
Replacement of damaged hip joint with artificial implant.
10. How long does joint replacement last?
Usually 15–20 years or more.
11. What is Arthritis?
Inflammation of joints causing pain and stiffness.
12. What is Osteoarthritis?
Age-related wear and tear of joints.
13. What is Rheumatoid arthritis?
Autoimmune disease affecting joints.
14. What is ACL injury?
Tear of the Anterior Cruciate Ligament in the knee.
15. How is ACL treated?
Physiotherapy or arthroscopic surgery.
16. What is Arthroscopy?
Minimally invasive joint surgery using a camera.
17. What is Meniscus tear?
Tear in knee cartilage.
18. What is Shoulder dislocation?
When shoulder joint slips out of place.
19. What is Frozen shoulder?
Stiffness and pain in shoulder joint.
20. How is Frozen shoulder treated?

Physiotherapy, medicines, or injections.

21. What is Slip disc?
Bulging of spinal disc causing nerve pain.

22. What are symptoms of Slip disc?
Back pain, leg pain, numbness.

23. Is Slip disc surgery always required?
No, most cases improve with medicines and physiotherapy.

24. What is Sciatica?
Pain radiating from lower back to leg.

25. What causes Sciatica?
Compression of sciatic nerve.

26. What is Spine surgery?
Procedure to correct severe spinal problems.

27. What is Scoliosis?
Abnormal sideways curvature of spine.

28. What is Osteoporosis?
Weakening of bones due to loss of bone density.

29. Who is at risk of Osteoporosis?
Post-menopausal women and elderly people.

30. What is Sports injury?
Injury occurring during physical activity.

31. What is Tennis elbow?
Pain on outer side of elbow due to overuse.

32. What is Carpal tunnel syndrome?
Nerve compression in wrist causing hand numbness.

33. What is Clubfoot?
Birth defect where foot is twisted inward.

34. Can children have bone problems?
Yes, including fractures and growth issues.

35. What is Physiotherapy?
Exercise-based therapy to improve movement and reduce pain.

36. How long is recovery after bone surgery?
Depends on type, usually 4–12 weeks.

37. What is Plaster cast?
Hard protective covering to stabilize broken bone.

38. When can I walk after fracture?
Depends on bone type and healing progress.

39. What is Bone infection?
Infection inside bone called Osteomyelitis.

40. What is Trigger finger?
Finger locking due to tendon inflammation.

41. What is Heel pain?
Pain under heel often due to plantar fasciitis.

42. What is Bunion?
Bony bump at base of big toe.

43. What is Rotator cuff injury?
Tear in shoulder muscles.

44. Are orthopedic surgeries safe?
Yes, when done by trained specialists.

45. How to prevent joint problems?
Maintain healthy weight and regular exercise.

46. Is joint pain common with aging?
Yes, especially due to arthritis.

47. What is Bone graft?
Procedure to replace missing bone.
48. What is External fixation?
Device used outside body to stabilize fractures.
49. Can elderly undergo orthopedic surgery?
Yes, if medically fit.
50. Can most bone and joint problems be treated successfully?
Yes, early diagnosis improves outcomes.

GYNECOLOGY

1. What is Gynecology?
Gynecology is the medical specialty that treats women's reproductive health.
2. Who is a Gynecologist?
A doctor specialized in female reproductive system and pregnancy care.
3. What is PCOS?
Polycystic Ovary Syndrome is a hormonal disorder affecting ovaries.
4. What are symptoms of PCOS?
Irregular periods, weight gain, acne, excessive hair growth.
5. Can PCOS be treated?
Yes, with lifestyle changes and medicines.
6. What are Fibroids?
Non-cancerous growths in the uterus.
7. Do Fibroids require surgery?
Only if causing heavy bleeding or pain.
8. What is Ovarian cyst?
Fluid-filled sac in ovary.
9. Are ovarian cysts dangerous?
Most are harmless and resolve naturally.
10. What is Endometriosis?
Condition where uterine lining grows outside uterus.
11. What are symptoms of Endometriosis?
Severe period pain, infertility.
12. What is C-section?
Surgical delivery of baby.
13. When is C-section needed?
Complications in labor or baby distress.
14. What is Normal delivery?
Natural vaginal childbirth.
15. What is Infertility?
Inability to conceive after 1 year of trying.
16. What causes female infertility?
Hormonal imbalance, blocked tubes, PCOS.
17. What is IVF?
In vitro fertilization; fertilizing egg outside body.
18. What is Menopause?
Permanent end of menstrual cycles.
19. What are menopause symptoms?
Hot flashes, mood changes, irregular periods.
20. What is Hysterectomy?
Surgical removal of uterus.
21. When is Hysterectomy required?
Severe fibroids, cancer, heavy bleeding.

22. What is Vaginal infection?
Infection causing discharge and itching.
23. What causes white discharge?
Normal or due to infection.
24. What is Cervical cancer?
Cancer of cervix.
25. What is Pap smear?
Screening test for cervical cancer.
26. How often is Pap smear needed?
Every 3 years for eligible women.
27. What is Ectopic pregnancy?
Pregnancy outside uterus.
28. Is Ectopic pregnancy dangerous?
Yes, it is life-threatening.
29. What is PMS?
Pre-menstrual syndrome causing mood and body symptoms.
30. What is Heavy menstrual bleeding?
Excessive bleeding during periods.
31. What is Laparoscopic gynecology surgery?
Minimally invasive surgery for uterus/ovary problems.
32. What is Tubal ligation?
Permanent birth control surgery.
33. What is Uterine prolapse?
Dropping of uterus into vaginal canal.
34. Can prolapse be treated?
Yes, with exercises or surgery.
35. What is Breast examination?
Checking breasts for lumps or abnormalities.
36. What is Mastitis?
Breast infection during breastfeeding.
37. What is Hormonal imbalance?
Disturbance in body hormone levels.
38. What is Contraception?
Methods to prevent pregnancy.
39. What are common contraceptive methods?
Pills, copper-T, condoms, injections.
40. What is Copper-T?
Intrauterine device for birth control.
41. Can teenagers visit gynecologist?
Yes, for menstrual or hormonal issues.
42. What is HPV vaccine?
Vaccine to prevent cervical cancer.
43. Is Gynecology surgery safe?
Yes, when done by experienced doctors.
44. What is High-risk pregnancy?
Pregnancy with medical complications.
45. What is Gestational diabetes?
Diabetes during pregnancy.
46. What is Preeclampsia?
High blood pressure during pregnancy.
47. When should I see a gynecologist?
Irregular periods, severe pain, pregnancy care.
48. Can lifestyle affect reproductive health?

Yes, diet and weight matter.
49. Are irregular periods common?
Yes, especially in PCOS or stress.
50. Can most gynecological problems be treated?
Yes, early care improves outcomes.

CARDIOLOGY

1. What is Cardiology?
Cardiology is the medical specialty that deals with heart and blood vessel diseases.
2. Who is a Cardiologist?
A doctor specialized in diagnosing and treating heart conditions.
3. What is Heart attack?
A heart attack occurs when blood flow to heart muscle is blocked.
4. What are symptoms of Heart attack?
Chest pain, sweating, breathlessness, nausea, left arm pain.
5. Is heart attack an emergency?
Yes, immediate medical treatment is required.
6. What is Angiography?
A test that uses dye and X-ray to see heart arteries.
7. What is Angioplasty?
Procedure to open blocked heart arteries using balloon and stent.
8. What is a Stent?
A small mesh tube placed inside artery to keep it open.
9. What is Bypass surgery?
Surgery that creates new route for blood flow around blocked artery.
10. What is High blood pressure?
Condition where blood pressure stays consistently high.
11. Why is High BP dangerous?
It increases risk of heart attack and stroke.
12. What is Low blood pressure?
Blood pressure lower than normal causing dizziness.
13. What is Cholesterol?
Fatty substance in blood that can block arteries.
14. What is Good cholesterol?
HDL cholesterol which protects heart.
15. What is Bad cholesterol?
LDL cholesterol that blocks arteries.
16. What is ECG?
Test that records electrical activity of heart.
17. What is 2D Echo?
Ultrasound test of heart structure and function.
18. What is TMT?
Treadmill test to check heart under stress.
19. What is Heart failure?
Condition where heart cannot pump blood effectively.
20. What are symptoms of Heart failure?
Breathlessness, swelling in legs, fatigue.
21. What is Arrhythmia?
Irregular heartbeat.
22. Is Arrhythmia serious?
Some types are harmless; others require treatment.
23. What is Pacemaker?

Device implanted to regulate heartbeat.

24. What is Congenital heart disease?
Heart defect present since birth.

25. What is Valve disease?
Damage or narrowing of heart valves.

26. What is Valve replacement?
Surgery to replace damaged heart valve.

27. What is Cardiomyopathy?
Disease of heart muscle.

28. What is Stroke?
Brain damage due to blocked or burst blood vessel.

29. How are heart diseases prevented?
Healthy diet, exercise, no smoking.

30. What is Diabetes and heart risk?
Diabetes increases risk of heart disease.

31. Can stress affect heart?
Yes, chronic stress increases heart risk.

32. What is Chest pain?
Discomfort in chest that may indicate heart issue.

33. When is chest pain dangerous?
If severe, sudden, or associated with sweating and breathlessness.

34. What is Angina?
Chest pain due to reduced blood supply to heart.

35. What is Cardiac arrest?
Sudden stopping of heart function.

36. Is Cardiac arrest same as heart attack?
No, they are different but related conditions.

37. What is Heart murmur?
Abnormal heart sound due to valve issue.

38. What is Blood clot?
Clump of blood that can block vessels.

39. What is Peripheral artery disease?
Narrowing of blood vessels in legs.

40. What is Heart rate?
Number of heartbeats per minute.

41. What is Normal heart rate?
Usually 60–100 beats per minute in adults.

42. Can young people have heart disease?
Yes, especially with unhealthy lifestyle.

43. What is Obesity and heart risk?
Obesity increases risk of hypertension and heart attack.

44. How often should heart check-up be done?
Yearly after age 40 or earlier if risk factors present.

45. What is Blood pressure normal range?
Around 120/80 mmHg.

46. Is Angioplasty permanent?
It improves blood flow but lifestyle control is essential.

47. What is Cardiac rehabilitation?
Exercise and lifestyle program after heart event.

48. Are heart surgeries safe?
Yes, with modern technology and experienced teams.

49. When should I see a Cardiologist?
Chest pain, high BP, breathlessness, family history.

50. Can most heart diseases be managed?
Yes, early detection and lifestyle changes improve outcomes.

NEUROSURGERY

1. What is Neurosurgery?
Neurosurgery is a medical specialty that deals with the diagnosis and surgical treatment of disorders affecting the brain, spine, and nervous system.
2. Who is a Neurosurgeon?
A neurosurgeon is a doctor specialized in performing surgeries on the brain, spine, and nerves.
3. What conditions do Neurosurgeons treat?
They treat brain tumors, spinal disorders, nerve injuries, epilepsy, and vascular conditions like aneurysms.
4. What is a brain tumor?
A brain tumor is an abnormal growth of cells within the brain, which can be benign or malignant.
5. What are symptoms of a brain tumor?
Headaches, seizures, vision changes, nausea, and weakness.
6. How is a brain tumor diagnosed?
Through MRI, CT scans, and neurological exams.
7. What is spinal stenosis?
Spinal stenosis is a narrowing of the spaces in the spine that can put pressure on the nerves.
8. What causes spinal stenosis?
Aging, arthritis, or disc degeneration.
9. How is spinal stenosis treated?
It can be treated with physical therapy, medicines, and sometimes surgery.
10. What is a slipped disc?
A slipped (or herniated) disc happens when one of the soft discs between spinal bones pushes out, causing pain.
11. What are symptoms of a slipped disc?
Back pain, leg pain, numbness, and weakness.
12. What is epilepsy?
Epilepsy is a neurological disorder that causes recurrent seizures.
13. Can epilepsy be treated with surgery?
Yes, in some cases, neurosurgery can help control seizures.
14. What is a stroke?
A stroke happens when blood flow to a part of the brain is interrupted, causing brain cells to die.
15. What are symptoms of a stroke?
Sudden numbness, difficulty speaking, facial drooping, and loss of coordination.
16. Is a stroke an emergency?
Yes, immediate medical attention is crucial.
17. What is an aneurysm?
An aneurysm is a bulge in a blood vessel in the brain, which can rupture and cause bleeding.
18. How is an aneurysm treated?
With surgery or endovascular procedures to prevent rupture.
19. What is brain surgery like?
It involves making an incision, navigating to the affected area, and removing or repairing the problem under anesthesia.
20. What is minimally invasive brain surgery?
It uses smaller incisions, guided by imaging, to reduce recovery time.
21. How long does recovery from brain surgery take?
It can take weeks to months depending on the procedure and patient's overall health.
22. What is a spinal fusion?
Spinal fusion is surgery where two or more vertebrae are permanently joined to reduce movement and pain.
23. What is a shunt?
A shunt is a device implanted to drain excess fluid from the brain in conditions like hydrocephalus.

24. What is hydrocephalus?
It is a condition where excess cerebrospinal fluid builds up in the brain.
25. What is Parkinson's disease?
Parkinson's disease is a neurodegenerative disorder that affects movement.
26. Can Parkinson's be treated with surgery?
Yes, deep brain stimulation (DBS) is a common surgical treatment for Parkinson's.
27. What is a nerve injury?
A nerve injury is damage to the nerves, which can lead to pain, numbness, or weakness.
28. How is nerve damage treated?
With medicines, physical therapy, or sometimes surgery to repair the nerve.
29. What is a concussion?
A concussion is a mild traumatic brain injury caused by a blow to the head.
30. What are symptoms of a concussion?
Headache, dizziness, nausea, and confusion.
31. How is a concussion treated?
Rest, avoiding strenuous activities, and monitoring symptoms.
32. What is spinal cord injury?
Damage to the spinal cord that can affect movement and sensation.
33. Can spinal cord injuries be reversed?
No complete cure, but rehabilitation and surgery may improve function.
34. What is Chiari malformation?
It is a condition where brain tissue extends into the spinal canal.
35. What are symptoms of Chiari malformation?
Headaches, neck pain, dizziness, and balance problems.
36. How is Chiari malformation treated?
Surgery is often used to relieve pressure on the brain.
37. What is a pituitary tumor?
A tumor on the pituitary gland, which controls hormones in the body.
38. Can pituitary tumors affect vision?
Yes, if they press on the optic nerves.
39. What is stereotactic surgery?
A precise, minimally invasive surgery guided by advanced imaging.
40. What is a lumbar puncture?
A procedure to collect cerebrospinal fluid from the lower spine for testing.
41. What is neuroendoscopy?
A minimally invasive technique that uses an endoscope to perform surgery inside the brain or spine.
42. How do I prepare for neurosurgery?
Follow your surgeon's instructions—stop certain medications, fast before surgery, and arrange post-op care.
43. What are risks of neurosurgery?
Infection, bleeding, nerve damage, or anesthesia complications (rare but serious).
44. Can children have neurosurgery?
Yes, pediatric neurosurgeons treat children with brain and spine conditions.
45. What is a brain aneurysm screening?
A test that looks for bulging blood vessels in the brain before they rupture.
46. What is the success rate of neurosurgery?
It depends on the condition, but many procedures have high success rates with early diagnosis.
47. What is the role of physical therapy after neurosurgery?
Physical therapy helps regain strength, mobility, and function post-surgery.
48. How long is hospital stay after brain surgery?
It varies, typically a few days to a week depending on the complexity.
49. What is neuro-rehabilitation?
A program of therapy to help recover after brain or spinal surgery.
50. When should I see a neurosurgeon?

If you have chronic headaches, unexplained neurological symptoms, or injuries affecting your brain, spine, or nerves.

GASTROENTEROLOGY

1. What is Gastroenterology?
Gastroenterology is the medical specialty that focuses on the digestive system, including the stomach, intestines, liver, pancreas, and gallbladder.
2. Who is a Gastroenterologist?
A gastroenterologist is a doctor who diagnoses and treats digestive system disorders.
3. What are common digestive problems?
Common problems include acidity, GERD, ulcers, constipation, diarrhea, IBS, piles, and liver disease.
4. What is GERD?
GERD is a condition where stomach acid frequently flows back into the food pipe, causing heartburn.
5. What are symptoms of GERD?
Burning in the chest, sour taste in the mouth, chest discomfort, and difficulty swallowing.
6. How is GERD treated?
With medications, diet changes, weight control, and sometimes surgery.
7. What is Irritable Bowel Syndrome (IBS)?
IBS is a common condition causing abdominal pain, bloating, diarrhea, or constipation.
8. Is IBS dangerous?
No, IBS is not life-threatening, but it can affect daily life and comfort.
9. What is constipation?
Constipation is when bowel movements are infrequent or difficult to pass.
10. What causes constipation?
Low fiber intake, less water, lack of exercise, or certain medicines.
11. What is diarrhea?
Diarrhea is frequent loose or watery stools.
12. When should I see a doctor for diarrhea?
If it lasts more than 3 days, has blood, or causes dehydration.
13. What are stomach ulcers?
Ulcers are open sores in the lining of the stomach or small intestine.
14. What causes ulcers?
Bacterial infection (H. pylori), painkiller overuse, or stress.
15. What is fatty liver?
Fatty liver is when excess fat builds up in the liver.
16. Is fatty liver serious?
It can become serious if untreated, leading to liver damage.
17. What is hepatitis?
Hepatitis is inflammation of the liver, often caused by viral infection.
18. What is jaundice?
Jaundice causes yellowing of the skin and eyes due to liver problems.
19. What are gallstones?
Gallstones are hard deposits that form in the gallbladder.
20. What are symptoms of gallstones?
Severe right-side abdominal pain, nausea, and vomiting.
21. What is pancreatitis?
Pancreatitis is inflammation of the pancreas.
22. What causes pancreatitis?
Gallstones, alcohol use, or high triglycerides.
23. What is piles (hemorrhoids)?
Piles are swollen veins in the lower rectum or anus.
24. What are symptoms of piles?
Pain, itching, and bleeding during bowel movement.

25. What is fissure?
A fissure is a small tear in the lining of the anus.
26. What is fistula?
A fistula is an abnormal tunnel between the anal canal and skin.
27. What is endoscopy?
Endoscopy is a procedure to view the inside of the digestive tract using a thin camera tube.
28. Is endoscopy painful?
It is usually painless and done under mild sedation.
29. What is colonoscopy?
Colonoscopy examines the large intestine using a flexible camera.
30. Why is colonoscopy done?
To detect polyps, cancer, bleeding, or chronic diarrhea.
31. What are colon polyps?
Polyps are small growths inside the colon that can sometimes turn cancerous.
32. What is colorectal cancer?
Cancer that starts in the colon or rectum.
33. What are warning signs of colon cancer?
Blood in stool, weight loss, and persistent bowel changes.
34. What is acidity?
Acidity is excess stomach acid causing burning sensation.
35. How can I prevent acidity?
Avoid spicy food, eat small meals, and avoid lying down after eating.
36. What causes bloating?
Gas buildup, overeating, or digestive disorders.
37. What is lactose intolerance?
Inability to digest lactose found in milk products.
38. What is celiac disease?
An autoimmune condition where gluten damages the small intestine.
39. What is liver cirrhosis?
Severe liver scarring due to long-term damage.
40. What are symptoms of liver disease?
Fatigue, swelling, jaundice, and abdominal pain.
41. What is GI bleeding?
Bleeding anywhere in the digestive tract.
42. What causes vomiting blood?
Ulcers, liver disease, or severe gastritis.
43. What is food poisoning?
Illness caused by contaminated food or water.
44. How can digestive problems be prevented?
Healthy diet, regular exercise, hydration, and avoiding alcohol.
45. Are digestive diseases common?
Yes, they are very common and affect people of all ages.
46. When should I consult a gastroenterologist?
If symptoms persist for more than a few days or worsen.
47. Can stress affect digestion?
Yes, stress can worsen acidity, IBS, and stomach pain.
48. Are digestive problems treatable?
Yes, most conditions can be managed effectively with proper treatment.
49. Do digestive diseases require surgery?
Most are treated with medicines, but some conditions may need surgery.
50. Is early diagnosis important?
Yes, early diagnosis prevents complications and ensures better recovery.

AESTHETIC & COSMETIC SURGERY

1. What is Aesthetic Surgery?
Aesthetic surgery focuses on improving appearance through surgical and non-surgical procedures.
2. Who is a Cosmetic Surgeon?
A cosmetic surgeon is a doctor trained to perform procedures that enhance physical appearance.
3. What is Rhinoplasty?
Rhinoplasty is nose reshaping surgery to improve appearance or breathing.
4. Is rhinoplasty painful?
It is performed under anesthesia, so you do not feel pain during surgery. Mild swelling is common afterward.
5. What is Gynecomastia?
Gynecomastia is enlargement of male breast tissue.
6. How is gynecomastia treated?
It is treated with a minor surgical procedure to remove excess gland or fat.
7. What is Lipoma?
Lipoma is a soft, fatty lump under the skin.
8. Is lipoma dangerous?
No, lipoma is usually harmless but can be removed if painful or growing.
9. What is liposuction?
Liposuction removes stubborn body fat from specific areas.
10. Is liposuction a weight-loss procedure?
No, it is for body contouring, not weight reduction.
11. What is tummy tuck (abdominoplasty)?
A surgery to remove excess skin and tighten abdominal muscles.
12. What is breast augmentation?
Surgery to increase breast size using implants.
13. What is breast reduction?
Surgery to reduce large breast size for comfort and shape.
14. What is facelift surgery?
A procedure to reduce wrinkles and sagging skin on the face.
15. What is blepharoplasty?
Eyelid surgery to remove excess skin or fat around the eyes.
16. What is Botox?
Botox is an injectable treatment that reduces wrinkles temporarily.
17. What are dermal fillers?
Injectable gels used to restore facial volume and smooth lines.
18. How long does Botox last?
Usually 4 to 6 months.
19. Are fillers permanent?
Most fillers are temporary and last 6 to 18 months.
20. What is hair transplant?
A procedure to restore hair in bald areas.
21. Is hair transplant permanent?
Yes, transplanted hair is usually permanent.
22. What is PRP therapy?
Platelet-Rich Plasma therapy uses your blood to improve hair growth or skin quality.
23. What is laser skin treatment?
Laser therapy improves skin tone, scars, and pigmentation.
24. What is acne scar treatment?
Procedures like laser, microneedling, or peels to reduce scars.
25. What is chemical peel?
A skin treatment that removes damaged outer layers.
26. What is skin whitening treatment?

Procedures that improve skin brightness and tone.

27. What is mole removal?
Procedure to safely remove unwanted skin moles.

28. What is scar revision?
Surgery or treatment to improve scar appearance.

29. What is dimple creation surgery?
A cosmetic procedure to create natural-looking dimples.

30. What is chin augmentation?
Procedure to enhance chin shape using fillers or implants.

31. What is jawline contouring?
Treatment to enhance jaw definition.

32. What is thread lift?
A non-surgical procedure to lift sagging skin.

33. What is body contouring?
Procedures that reshape and sculpt body areas.

34. What is vaginal tightening surgery?
Procedure to tighten vaginal muscles for functional or aesthetic reasons.

35. What is labiaplasty?
Surgery to reshape or reduce labial tissue.

36. What is skin grafting?
A surgical procedure to repair damaged skin.

37. What is fat grafting?
Transferring fat from one body area to another.

38. Is cosmetic surgery safe?
Yes, when performed by qualified surgeons in proper facilities.

39. How long is recovery after cosmetic surgery?
Recovery depends on the procedure, usually a few days to weeks.

40. Will there be scars after surgery?
Minimal scars are common but usually fade over time.

41. Can cosmetic surgery improve confidence?
Yes, many patients feel more confident after treatment.

42. What is non-surgical face lifting?
Using fillers, threads, or energy devices to lift the face.

43. What is laser hair removal?
Permanent reduction of unwanted hair using laser.

44. Is laser hair removal permanent?
It provides long-term hair reduction.

45. What is pigmentation treatment?
Treatment to reduce dark patches or uneven skin tone.

46. What is under-eye treatment?
Procedures to reduce dark circles or puffiness.

47. What is nose thread lift?
A non-surgical method to enhance nose shape.

48. Can cosmetic procedures be combined?
Yes, multiple procedures can sometimes be safely combined.

49. What age is suitable for cosmetic surgery?
It depends on the procedure and medical evaluation.

50. Is consultation important before cosmetic treatment?
Yes, proper consultation ensures safety and desired results.

PLASTIC SURGERY

1. What is Plastic Surgery?

Plastic surgery is a medical specialty that focuses on reconstructing and improving different parts of the body.

2. Is plastic surgery only cosmetic?
No, it includes both cosmetic (appearance-related) and reconstructive (medical need) procedures.

3. What is reconstructive plastic surgery?
It restores body parts affected by injury, burns, birth defects, or disease.

4. What is cosmetic plastic surgery?
It improves appearance based on personal preference.

5. What conditions does a plastic surgeon treat?
Burns, scars, birth defects, trauma injuries, deformities, and aesthetic concerns.

6. What is cleft lip and palate surgery?
A procedure to correct birth defects of the lip and roof of the mouth.

7. What is burn reconstruction?
Surgery to repair skin damage caused by burns.

8. What is skin grafting?
A procedure where healthy skin is transplanted to damaged areas.

9. What is flap surgery?
A technique where tissue with blood supply is moved from one body area to another.

10. What is scar revision surgery?
Treatment to improve the appearance of scars.

11. What is contracture release?
Surgery to improve movement restricted by tight scar tissue.

12. What is hand reconstruction surgery?
Surgery to repair hand injuries or deformities.

13. What is nerve repair surgery?
A procedure to repair damaged nerves.

14. What is tendon repair?
Surgery to fix torn or injured tendons.

15. What is facial trauma surgery?
Repair of facial fractures or injuries.

16. What is breast reconstruction?
Surgery to rebuild the breast after removal due to cancer.

17. What is reduction mammoplasty?
Breast reduction surgery for comfort and balance.

18. What is gynecomastia surgery?
Removal of enlarged male breast tissue.

19. What is rhinoplasty in plastic surgery?
Nose reshaping for cosmetic or functional reasons.

20. What is otoplasty?
Ear reshaping surgery to correct prominent ears.

21. What is lip reconstruction?
Surgery to repair lip defects from injury or cancer.

22. What is eyelid reconstruction?
Surgery to repair damaged eyelids.

23. What is microvascular surgery?
Advanced surgery using microscopes to repair small blood vessels.

24. What is limb reconstruction?
Surgery to repair severely injured arms or legs.

25. What is pressure sore reconstruction?
Surgery to treat severe bed sores.

26. What is skin tumor removal?
Surgical removal of abnormal skin growths.

27. What is mole excision?
Removal of moles for medical or cosmetic reasons.

28. What is cyst removal?
Surgical removal of fluid-filled sacs under the skin.
29. What is lipoma removal?
Surgical removal of fatty lumps.
30. What is abdominal wall reconstruction?
Repair of weakened or damaged abdominal muscles.
31. What is post-trauma reconstruction?
Repair of deformities caused by accidents.
32. What is congenital deformity correction?
Surgery to correct birth-related body abnormalities.
33. What is jaw reconstruction?
Surgery to rebuild damaged jaw structure.
34. What is facial reanimation surgery?
Procedure to restore movement in paralyzed facial muscles.
35. What is tissue expansion?
A technique to grow extra skin for reconstruction.
36. Is plastic surgery safe?
Yes, when performed by a qualified surgeon in a proper facility.
37. Is anesthesia required?
Most plastic surgeries are done under local or general anesthesia.
38. How long is recovery time?
Recovery depends on the procedure, ranging from days to weeks.
39. Will there be scars?
Some scarring is normal, but surgeons try to minimize and hide scars.
40. Is plastic surgery painful?
Mild discomfort is common, but pain is manageable with medication.
41. Can plastic surgery improve function?
Yes, reconstructive surgery often improves both function and appearance.
42. What is revision surgery?
A corrective procedure after a previous surgery.
43. Who is a good candidate for plastic surgery?
Healthy individuals with realistic expectations.
44. What tests are required before surgery?
Blood tests and medical evaluation are usually required.
45. Can smokers undergo plastic surgery?
Smoking increases risk, so quitting before surgery is advised.
46. What are risks of plastic surgery?
Infection, bleeding, scarring, or anesthesia complications.
47. How important is consultation?
Very important to understand procedure, risks, and outcomes.
48. Is hospital stay required?
Some procedures require admission, others are day-care.
49. Are results permanent?
Many reconstructive results are long-lasting, but aging continues.
50. Why choose a qualified plastic surgeon?
Proper training ensures safety, better results, and fewer complications.

LASIK SURGERY

1. What is LASIK?
LASIK is a laser eye surgery used to correct vision and reduce dependence on glasses or contact lenses.
2. What does LASIK stand for?
Laser-Assisted In Situ Keratomileusis.

3. What vision problems can LASIK treat?
Myopia (near-sightedness), hypermetropia (far-sightedness), and astigmatism.
4. Is LASIK permanent?
Yes, the correction is permanent, but age-related changes may still occur later.
5. Who is eligible for LASIK?
Adults above 18 years with stable eye power and healthy corneas.
6. Who is not eligible for LASIK?
People with very thin corneas, unstable power, severe dry eyes, or certain eye diseases.
7. Is LASIK painful?
No, it is usually painless as numbing drops are used.
8. How long does the LASIK procedure take?
The laser part takes only a few minutes per eye.
9. Is LASIK done in one day?
Yes, it is a day-care procedure and patients go home the same day.
10. How soon can I see clearly after LASIK?
Most patients notice clearer vision within 24 hours.
11. Is LASIK safe?
Yes, it is considered safe when performed by an experienced surgeon.
12. What tests are done before LASIK?
Detailed eye check-up, corneal thickness test, and power measurement.
13. What is corneal thickness?
It is the thickness of the front layer of the eye, important for LASIK eligibility.
14. What is bladeless LASIK?
A type of LASIK where a laser is used instead of a blade to create the flap.
15. What is Contoura Vision LASIK?
An advanced LASIK technique that maps the cornea for more precise correction.
16. What is SMILE surgery?
A minimally invasive laser vision correction alternative to LASIK.
17. What is PRK?
PRK is another type of laser vision correction without creating a flap.
18. How long is recovery after LASIK?
Most patients recover within a few days.
19. Can both eyes be treated together?
Yes, usually both eyes are treated in the same session.
20. Will I need glasses after LASIK?
Most patients do not need glasses for distance vision afterward.
21. Can LASIK fail?
Rarely, but some patients may need enhancement treatment.
22. What is LASIK enhancement?
A second minor procedure to fine-tune vision if needed.
23. Are there side effects of LASIK?
Temporary dryness, glare, or halos may occur.
24. How long do side effects last?
Most side effects improve within a few weeks.
25. What is dry eye after LASIK?
Temporary reduction in tear production after surgery.
26. Can LASIK cause blindness?
Serious complications are extremely rare.
27. Is LASIK suitable for high power?
It depends on corneal thickness and overall eye health.
28. What is the ideal age for LASIK?
Usually between 18 and 40 years, after power stabilizes.
29. Can pregnant women undergo LASIK?

It is usually advised to wait until after pregnancy.

30. Can diabetic patients undergo LASIK?

Yes, if diabetes is well controlled and eyes are healthy.

31. Do I need to stop contact lenses before LASIK?

Yes, lenses should be stopped for a few days to weeks before testing.

32. Is anesthesia required?

Only numbing eye drops are used.

33. How long should I rest after LASIK?

Rest for 1–2 days and avoid strain for a week.

34. Can I use mobile or laptop after LASIK?

Limit screen time for a few days to reduce dryness.

35. Can I wash my face after LASIK?

Yes, but avoid water entering the eyes for a few days.

36. When can I resume work?

Most patients return to work within 2–3 days.

37. Can I drive after LASIK?

Usually within a few days, once vision stabilizes.

38. When can I exercise after LASIK?

Light exercise after a week; avoid heavy workouts for 2–3 weeks.

39. Can LASIK correct cylindrical power?

Yes, LASIK treats astigmatism effectively.

40. Is LASIK better than glasses?

It offers freedom from glasses but depends on personal choice.

41. What are halos and glare?

Light sensitivity at night, usually temporary.

42. Can LASIK treat presbyopia?

Standard LASIK does not fully correct age-related near vision loss.

43. What is monovision LASIK?

One eye corrected for distance and the other for near vision.

44. Is follow-up necessary after LASIK?

Yes, regular follow-up ensures proper healing.

45. How many follow-ups are required?

Usually 3–4 visits within the first few months.

46. What precautions should be taken after LASIK?

Avoid rubbing eyes and follow prescribed eye drops.

47. Can LASIK be repeated?

In selected cases, enhancement can be done.

48. How successful is LASIK?

Success rate is very high with excellent patient satisfaction.

49. Does LASIK affect future cataract surgery?

No, but the surgeon should know your LASIK history.

50. Why is proper evaluation important before LASIK?

It ensures safety, suitability, and the best visual outcome.

GYNECOMASTIA

1. What is Gynecomastia?

Gynecomastia is enlargement of male breast tissue.

2. Is gynecomastia common?

Yes, it is common in teenage boys and adult men.

3. What causes gynecomastia?

Hormonal imbalance between testosterone and estrogen.

4. Can puberty cause gynecomastia?

Yes, temporary breast enlargement is common during puberty.

5. Can gynecomastia go away on its own?
In teenagers, it may resolve naturally. In adults, it usually does not.

6. Is gynecomastia dangerous?
No, it is usually not dangerous but may cause emotional discomfort.

7. Is gynecomastia cancer?
No, it is not cancer.

8. What are symptoms of gynecomastia?
Swelling of chest tissue, tenderness, or uneven chest shape.

9. How is gynecomastia diagnosed?
Through physical examination and sometimes blood tests or ultrasound.

10. What is pseudo-gynecomastia?
Chest enlargement due to excess fat, not gland tissue.

11. How is gynecomastia treated?
Through surgery when persistent or severe.

12. What is gynecomastia surgery?
A procedure to remove excess gland and fat from the chest.

13. Is liposuction used in gynecomastia?
Yes, liposuction removes excess fat.

14. Is gland removal necessary?
Yes, in true gynecomastia gland removal is often required.

15. Is the surgery painful?
It is done under anesthesia; mild discomfort occurs afterward.

16. How long does the surgery take?
Usually 1–2 hours.

17. Is hospital stay required?
Mostly it is a day-care procedure.

18. Will there be scars?
Small scars are present but usually fade over time.

19. What type of anesthesia is used?
Local or general anesthesia depending on the case.

20. How long is recovery?
Most patients recover within 1–2 weeks.

21. When can I return to work?
Usually within 3–5 days.

22. When can I start gym after surgery?
Light exercise after 2 weeks; heavy workouts after 4–6 weeks.

23. Do I need to wear a compression garment?
Yes, for 3–6 weeks to reduce swelling.

24. Will swelling occur after surgery?
Yes, mild swelling is normal and improves gradually.

25. Are stitches removed later?
Some stitches dissolve; others may need removal after a week.

26. Is gynecomastia surgery permanent?
Yes, results are usually permanent.

27. Can gynecomastia come back?
Rarely, unless caused by weight gain or hormonal imbalance.

28. Is weight loss enough to treat gynecomastia?
Weight loss helps in fat-related cases but not gland enlargement.

29. Can medicines cure gynecomastia?
Medicines may help in early stages, but surgery is most effective.

30. What are grades of gynecomastia?
Mild, moderate, and severe depending on tissue size.

31. Is surgery safe?
Yes, when performed by a qualified surgeon.
32. What are risks of surgery?
Infection, bleeding, swelling, or minor asymmetry.
33. Will nipples look normal after surgery?
Yes, surgeons aim to maintain natural chest appearance.
34. Can both sides be treated together?
Yes, both sides are usually treated in the same session.
35. Is it covered by insurance?
Usually not, unless medically necessary.
36. What tests are needed before surgery?
Blood tests and medical evaluation.
37. Can teenagers undergo surgery?
Usually advised after puberty when condition persists.
38. Can steroid use cause gynecomastia?
Yes, anabolic steroids can cause it.
39. Can alcohol cause gynecomastia?
Excessive alcohol can affect hormones and contribute.
40. Can obesity cause gynecomastia?
Obesity can cause fat accumulation in the chest.
41. Is there visible improvement immediately?
Yes, chest shape improves immediately after surgery.
42. Will skin tighten after surgery?
In mild cases yes; severe cases may need skin tightening.
43. Can it affect confidence?
Yes, many men feel self-conscious due to chest enlargement.
44. Does surgery improve confidence?
Yes, many patients feel more confident after treatment.
45. How soon can I shower after surgery?
Usually after 48 hours, as advised by the doctor.
46. Is follow-up required?
Yes, regular follow-up ensures proper healing.
47. Can I travel after surgery?
Short travel after a few days is usually allowed.
48. Is the result natural looking?
Yes, when performed properly.
49. How long do results last?
Results are long-lasting if weight and hormones remain stable.
50. Why is consultation important before surgery?
It helps determine the type, grade, and best treatment plan safely.

RHINOPLASTY (NOSE SURGERY)

1. What is Rhinoplasty?
Rhinoplasty is a surgical procedure to reshape or resize the nose.
2. Why is rhinoplasty done?
To improve nose appearance, correct breathing problems, or fix injury.
3. Is rhinoplasty cosmetic or medical?
It can be both cosmetic (appearance) and functional (breathing correction).
4. What is functional rhinoplasty?
Surgery done to improve breathing issues.
5. What is cosmetic rhinoplasty?
Surgery done to enhance nose shape and facial balance.

6. What is septoplasty?
A procedure to correct a deviated nasal septum.
7. What is deviated septum?
When the wall inside the nose is bent, causing breathing difficulty.
8. Can rhinoplasty improve breathing?
Yes, if combined with septoplasty.
9. What age is suitable for rhinoplasty?
Usually after 18 years, once facial growth is complete.
10. Is rhinoplasty painful?
It is done under anesthesia; mild discomfort occurs after surgery.
11. How long does rhinoplasty surgery take?
Usually 1.5 to 3 hours.
12. Is hospital stay required?
Most cases are day-care procedures.
13. What type of anesthesia is used?
General anesthesia is commonly used.
14. What is open rhinoplasty?
A technique where a small incision is made between the nostrils.
15. What is closed rhinoplasty?
All incisions are made inside the nose.
16. Which technique is better?
It depends on the nose shape and surgeon's recommendation.
17. Will there be scars?
Scars are minimal and usually not visible.
18. How long is recovery?
Initial recovery is 1–2 weeks; full healing takes months.
19. When are stitches removed?
Usually within 5–7 days.
20. Is swelling normal after surgery?
Yes, swelling is common and reduces gradually.
21. How long does swelling last?
Major swelling reduces in weeks; minor swelling may take months.
22. When can I return to work?
Usually within 7–10 days.
23. When can I wear glasses after rhinoplasty?
Usually after 4–6 weeks.
24. Can I exercise after surgery?
Light activity after 2 weeks; heavy workouts after 4–6 weeks.
25. Will I have nasal packing?
Sometimes, depending on the procedure.
26. Is bleeding common after rhinoplasty?
Mild bleeding for a few days is normal.
27. Can rhinoplasty fix a crooked nose?
Yes, it can correct crooked or uneven noses.
28. Can it reduce nose size?
Yes, rhinoplasty can make the nose smaller.
29. Can it increase nose size?
Yes, using cartilage grafts if needed.
30. What are cartilage grafts?
Cartilage taken from nose, ear, or rib to reshape the nose.
31. Is rhinoplasty permanent?
Yes, results are usually permanent.
32. Can rhinoplasty fail?

Rarely, but revision surgery may be needed in some cases.

33. What is revision rhinoplasty?
A corrective surgery after a previous rhinoplasty.

34. Are results visible immediately?
Shape is visible, but final results appear after swelling subsides.

35. Can rhinoplasty change my voice?
No, it usually does not affect voice.

36. Can it treat nasal hump?
Yes, hump reduction is a common request.

37. Can it lift the nasal tip?
Yes, tip refinement is commonly done.

38. Can rhinoplasty fix wide nostrils?
Yes, nostril reduction can be performed.

39. Is rhinoplasty safe?
Yes, when performed by an experienced surgeon.

40. What are risks of rhinoplasty?
Infection, bleeding, asymmetry, or breathing difficulty.

41. Is consultation important?
Yes, to discuss expectations and evaluate suitability.

42. What tests are required before surgery?
Blood tests and general medical evaluation.

43. Can smokers undergo rhinoplasty?
Smoking should be stopped before and after surgery.

44. Can teenagers undergo rhinoplasty?
Only after full nasal growth is complete.

45. Will insurance cover rhinoplasty?
Only if done for functional reasons.

46. Can I travel after rhinoplasty?
Usually after 1–2 weeks, as advised.

47. Is nose thread lift an alternative?
Yes, but it is non-surgical and temporary.

48. How long does rhinoplasty last?
Results are long-term and usually lifelong.

49. Will my face look different?
Yes, the nose balance can enhance overall facial harmony.

50. Why choose a qualified plastic surgeon for rhinoplasty?
Experience ensures safer surgery and natural-looking results.

LIPOMA

1. What is a lipoma?
A lipoma is a soft, fatty lump that grows under the skin.

2. Is lipoma common?
Yes, lipomas are very common and usually harmless.

3. Is lipoma cancer?
No, lipoma is a benign (non-cancerous) tumor.

4. What causes lipoma?
The exact cause is unknown, but genetics may play a role.

5. Where do lipomas usually occur?
Commonly on the neck, shoulders, back, arms, and thighs.

6. Is lipoma painful?
Most lipomas are painless, but some may cause discomfort.

7. How does a lipoma feel?

It feels soft, movable, and rubbery under the skin.

8. Can lipoma grow in size?
Yes, it can slowly increase in size over time.

9. Is lipoma dangerous?
No, it is usually harmless unless it presses on nerves.

10. Can lipoma turn into cancer?
Very rarely, but typical lipomas do not become cancer.

11. What is liposarcoma?
A rare cancerous tumor of fat tissue, different from lipoma.

12. How is lipoma diagnosed?
Usually by physical examination; sometimes ultrasound is done.

13. Is biopsy needed for lipoma?
Only if the lump looks unusual or grows rapidly.

14. Does lipoma require treatment?
Treatment is needed only if it causes pain or cosmetic concern.

15. What is lipoma removal surgery?
A minor procedure to remove the fatty lump completely.

16. Is lipoma surgery painful?
It is done under local anesthesia, so pain is minimal.

17. How long does lipoma surgery take?
Usually 20–40 minutes depending on size.

18. Is hospital admission required?
No, it is mostly a day-care procedure.

19. Will there be stitches?
Yes, small stitches are placed after removal.

20. When are stitches removed?
Usually after 7–10 days.

21. Will there be a scar?
A small scar may remain but usually fades over time.

22. Can lipoma come back after removal?
Recurrence is rare if completely removed.

23. Can multiple lipomas occur?
Yes, some people develop multiple lipomas.

24. What is multiple lipomatosis?
A condition where many lipomas develop in the body.

25. Is lipoma hereditary?
Yes, it can run in families.

26. Can lipoma grow inside the body?
Yes, but internal lipomas are less common.

27. Can lipoma cause nerve pain?
Yes, if it presses on nearby nerves.

28. What size can lipoma reach?
It can range from small pea-sized lumps to larger masses.

29. Is lipoma removal necessary for small lumps?
Not always; only if symptomatic or cosmetically concerning.

30. Can medicines dissolve lipoma?
No, medicines do not remove lipomas.

31. Can liposuction remove lipoma?
Sometimes, but surgical excision is more effective.

32. How long is recovery after surgery?
Most patients recover within a few days.

33. Can I return to work after lipoma removal?
Yes, usually within 1–2 days.

34. Can lipoma become infected?
Rarely, but infection is possible.
35. What precautions are needed after surgery?
Keep the wound clean and follow doctor's instructions.
36. Is lipoma removal safe?
Yes, it is a simple and safe procedure.
37. What tests are required before surgery?
Basic blood tests may be required.
38. Can lipoma appear again in another area?
Yes, new lipomas can develop elsewhere.
39. Is lipoma related to obesity?
Not directly, but obesity may increase fat tissue.
40. Can exercise reduce lipoma?
No, exercise does not shrink lipomas.
41. Is lipoma removal covered by insurance?
It depends on medical necessity and policy terms.
42. Can children have lipoma?
Yes, though it is more common in adults.
43. What happens if lipoma is left untreated?
It may slowly grow but usually remains harmless.
44. Can lipoma affect movement?
Only if large or located near joints.
45. Is lipoma removal done under general anesthesia?
Usually local anesthesia is sufficient.
46. How soon can I shower after surgery?
Usually after 24–48 hours, as advised.
47. Is follow-up necessary?
Yes, to check healing and remove stitches if needed.
48. Can lipoma burst on its own?
No, lipomas do not burst naturally.
49. How do I know if my lump is lipoma?
A doctor can confirm after examination.
50. Why is consultation important for lipoma?
To confirm diagnosis and rule out other serious conditions.

ONCOLOGY (CANCER CARE)

1. What is Oncology?
Oncology is the medical specialty that deals with the diagnosis and treatment of cancer.
2. Who is an Oncologist?
An oncologist is a doctor who specializes in treating cancer.
3. What is cancer?
Cancer is a disease where abnormal cells grow uncontrollably in the body.
4. What causes cancer?
It can be caused by genetic factors, smoking, infections, radiation, or environmental exposure.
5. Is cancer always fatal?
No, many cancers are treatable and curable if detected early.
6. What are common types of cancer?
Breast, lung, oral, cervical, prostate, colon, and blood cancers.
7. What are early warning signs of cancer?
Unusual lumps, unexplained weight loss, persistent pain, bleeding, or fatigue.
8. What is a tumor?
A tumor is an abnormal growth of cells.

9. What is the difference between benign and malignant tumor?
Benign tumors are non-cancerous; malignant tumors are cancerous.
10. What is cancer staging?
Staging tells how advanced the cancer is and whether it has spread.
11. What is biopsy?
A biopsy is a test where a small tissue sample is taken to check for cancer.
12. What is chemotherapy?
Chemotherapy uses medicines to kill cancer cells.
13. What is radiation therapy?
Radiation therapy uses high-energy rays to destroy cancer cells.
14. What is surgery in cancer treatment?
Surgery removes the tumor from the body.
15. What is targeted therapy?
Treatment that targets specific cancer cell proteins.
16. What is immunotherapy?
Treatment that helps the immune system fight cancer.
17. What is hormonal therapy?
Treatment that blocks hormones that fuel certain cancers.
18. Is chemotherapy painful?
The treatment itself is not painful, but side effects may occur.
19. What are common side effects of chemotherapy?
Hair loss, nausea, weakness, and low immunity.
20. Does radiation therapy cause pain?
It is painless during treatment but may cause skin irritation.
21. Can cancer spread?
Yes, cancer can spread to other body parts (metastasis).
22. What is metastatic cancer?
Cancer that has spread from its original site.
23. Is early detection important?
Yes, early detection improves survival rates.
24. What is cancer screening?
Tests done to detect cancer before symptoms appear.
25. What are common cancer screening tests?
Mammography, Pap smear, colonoscopy, and PSA test.
26. Can lifestyle reduce cancer risk?
Yes, healthy diet, exercise, and avoiding tobacco help reduce risk.
27. Does smoking cause cancer?
Yes, smoking is a major cause of lung and other cancers.
28. Can cancer be genetic?
Some cancers can run in families.
29. What is palliative care?
Care focused on relieving pain and improving quality of life.
30. Can cancer be completely cured?
Some cancers are curable, especially when detected early.
31. What is remission?
When signs and symptoms of cancer reduce or disappear.
32. How long does cancer treatment last?
It depends on the type and stage of cancer.
33. Is hospital admission required for cancer treatment?
Some treatments are outpatient; others may require admission.
34. What is blood cancer?
Cancer affecting blood-forming tissues like bone marrow.
35. What is breast cancer?

Cancer that develops in breast tissue.
36. What is lung cancer?
Cancer that begins in the lungs.
37. What is oral cancer?
Cancer affecting mouth tissues.
38. What is cervical cancer?
Cancer affecting the cervix in women.
39. Can cancer come back after treatment?
Yes, recurrence is possible in some cases.
40. What follow-up is needed after cancer treatment?
Regular check-ups and scans as advised.
41. Does chemotherapy affect fertility?
It can affect fertility in some patients.
42. Can children get cancer?
Yes, childhood cancers do occur but are treatable.
43. Is cancer contagious?
No, cancer does not spread from person to person.
44. Can stress cause cancer?
Stress alone does not directly cause cancer.
45. What is bone marrow transplant?
A procedure to replace damaged bone marrow.
46. Can diet help during cancer treatment?
Yes, balanced nutrition supports recovery.
47. Is hair loss permanent after chemotherapy?
Usually hair grows back after treatment.
48. What is a cancer survivor?
A person who has completed cancer treatment.
49. How important is emotional support during cancer treatment?
Very important for mental strength and recovery.
50. Why consult an oncologist early?
Early consultation improves treatment success and survival chances.

VARICOSE VEINS

1. What are varicose veins?
Varicose veins are enlarged, twisted veins usually seen on the legs.
2. Why do varicose veins occur?
They occur due to weak or damaged vein valves.
3. Who is at risk for varicose veins?
People who stand for long hours, are overweight, pregnant, or have family history.
4. Are varicose veins dangerous?
Usually not serious, but they can cause discomfort and complications if untreated.
5. What are symptoms of varicose veins?
Leg pain, swelling, heaviness, itching, and visible blue veins.
6. Can varicose veins cause pain?
Yes, aching or throbbing pain is common.
7. Do varicose veins cause swelling?
Yes, especially after long standing.
8. What is spider vein?
Small red or blue veins visible on the skin surface.
9. Are spider veins and varicose veins same?
No, spider veins are smaller and less severe.
10. Can varicose veins cause ulcers?

Yes, in severe cases, skin ulcers may develop.

11. What is venous insufficiency?
A condition where veins cannot properly return blood to the heart.

12. How are varicose veins diagnosed?
Through physical exam and Doppler ultrasound.

13. What is Doppler ultrasound?
A test that checks blood flow in veins.

14. Can varicose veins go away on their own?
No, they usually do not disappear without treatment.

15. What are treatment options for varicose veins?
Compression stockings, laser treatment, injections, or surgery.

16. What are compression stockings?
Special socks that improve blood circulation in legs.

17. What is laser treatment for varicose veins?
A minimally invasive procedure using laser energy to close affected veins.

18. What is EVLA?
Endovenous Laser Ablation, a modern laser treatment for varicose veins.

19. What is RFA?
Radiofrequency Ablation, a heat-based treatment to seal veins.

20. Is varicose vein treatment painful?
Modern treatments are minimally painful.

21. Is hospital admission required?
Most treatments are day-care procedures.

22. How long does laser treatment take?
Usually 30–60 minutes.

23. How soon can I walk after treatment?
Walking is encouraged immediately after the procedure.

24. How long is recovery time?
Most patients resume normal activities within 1–2 days.

25. Will veins disappear immediately?
Some veins shrink quickly; others fade gradually.

26. Are there scars after treatment?
Minimally invasive treatments leave little to no scars.

27. Can varicose veins return?
New veins can develop, but treated veins usually do not reopen.

28. Is surgery required for all cases?
No, many cases are treated without open surgery.

29. What is vein stripping surgery?
Traditional surgery to remove affected veins.

30. Is vein stripping still common?
Less common now due to advanced laser techniques.

31. Can pregnancy cause varicose veins?
Yes, pregnancy increases pressure on leg veins.

32. Can obesity worsen varicose veins?
Yes, excess weight increases vein pressure.

33. Does standing long hours cause varicose veins?
Yes, prolonged standing increases risk.

34. Can exercise help varicose veins?
Yes, walking improves circulation.

35. Is varicose vein treatment safe?
Yes, when performed by experienced specialists.

36. What are risks of treatment?
Mild bruising, swelling, or temporary discomfort.

37. Can varicose veins cause blood clots?
In some cases, they may increase clot risk.
38. What is DVT?
Deep Vein Thrombosis, a serious blood clot condition.
39. Are varicose veins hereditary?
Yes, family history increases risk.
40. Can men get varicose veins?
Yes, though more common in women.
41. When should I see a doctor?
If you have persistent pain, swelling, or skin changes.
42. Can varicose veins affect daily life?
Yes, they can cause discomfort and cosmetic concern.
43. Is treatment covered by insurance?
Coverage depends on medical necessity and policy terms.
44. How long should compression stockings be worn?
As advised, usually for several weeks after treatment.
45. Can I travel after treatment?
Short travel is usually allowed after a few days.
46. Are lifestyle changes important?
Yes, weight control and regular exercise help prevent worsening.
47. Can massage cure varicose veins?
No, massage does not cure the condition.
48. Is varicose vein treatment permanent?
Treated veins are permanently sealed, but new veins may develop.
49. Can untreated varicose veins worsen?
Yes, they may lead to skin damage or ulcers.
50. Why is early treatment important?
Early treatment prevents complications and improves comfort.

SEPTOPLASTY – 50 FAQs (Patient-Friendly)

1. What is Septoplasty?
Septoplasty is a surgery to correct a deviated nasal septum.
2. What is a nasal septum?
The septum is the wall of cartilage and bone that divides the two nostrils.
3. What is a deviated septum?
When the septum is bent or shifted, blocking airflow.
4. What problems can a deviated septum cause?
Breathing difficulty, nasal blockage, sinus infections, and snoring.
5. When is septoplasty needed?
When nasal blockage affects breathing or quality of life.
6. Is septoplasty a cosmetic surgery?
No, it is mainly a functional surgery to improve breathing.
7. Can septoplasty change nose shape?
Usually no, unless combined with rhinoplasty.
8. What is septorhinoplasty?
A combined surgery to correct septum and reshape the nose.
9. Is septoplasty painful?
It is done under anesthesia; mild discomfort occurs afterward.
10. What type of anesthesia is used?
Local or general anesthesia depending on the case.
11. How long does septoplasty take?
Usually 45 minutes to 1.5 hours.

12. Is hospital stay required?
Mostly it is a day-care procedure.
13. Will there be visible scars?
No, cuts are made inside the nose.
14. Is nasal packing required?
Sometimes soft packing is placed for a short time.
15. When is nasal packing removed?
Usually within 24–48 hours.
16. How long is recovery after septoplasty?
Initial recovery takes about 1–2 weeks.
17. When can I return to work?
Usually within 5–7 days.
18. Will there be swelling?
Mild internal swelling is normal.
19. Can I breathe immediately after surgery?
Breathing improves gradually as swelling reduces.
20. Is bleeding normal after septoplasty?
Mild bleeding or discharge may occur for a few days.
21. Can septoplasty cure snoring?
It may reduce snoring if caused by nasal blockage.
22. Can septoplasty treat sinus infections?
It can reduce sinus problems caused by blockage.
23. Is septoplasty permanent?
Yes, results are usually permanent.
24. Can the septum bend again?
Rarely, but re-deviation is uncommon.
25. What precautions should be taken after surgery?
Avoid nose blowing and heavy lifting for a few weeks.
26. Can I shower after septoplasty?
Yes, but avoid water entering the nose initially.
27. When can I exercise after surgery?
Light activity after 2 weeks; heavy workouts after 4 weeks.
28. Can children undergo septoplasty?
Usually recommended after nasal growth is complete.
29. Does septoplasty affect voice?
No, it does not change your voice.
30. Is septoplasty safe?
Yes, when performed by an experienced ENT surgeon.
31. What are risks of septoplasty?
Bleeding, infection, or temporary numbness.
32. Is follow-up required?
Yes, follow-up visits ensure proper healing.
33. Will I need stitches removed?
Most stitches inside the nose dissolve on their own.
34. Can septoplasty improve sleep quality?
Yes, better breathing can improve sleep.
35. Can septoplasty treat headaches?
It may reduce headaches caused by sinus pressure.
36. Is there any external swelling?
Usually minimal since surgery is internal.
37. How soon will I see full results?
Within a few weeks after swelling subsides.
38. Can I travel after septoplasty?

Short travel is usually allowed after a few days.

39. Is insurance coverage available?

Often covered if done for medical reasons.

40. Can septoplasty be combined with turbinate reduction?

Yes, if turbinates are enlarged.

41. What are turbinates?

Structures inside the nose that help filter and humidify air.

42. Does septoplasty improve oxygen flow?

Yes, it improves airflow through the nose.

43. Can allergies affect septoplasty results?

Allergies should be managed for best outcomes.

44. What tests are required before surgery?

Basic blood tests and nasal examination.

45. Can smokers undergo septoplasty?

Smoking should be stopped before and after surgery.

46. Will I feel pain after surgery?

Mild discomfort is common and manageable with medication.

47. Is it normal to feel blocked after surgery?

Yes, temporary swelling can cause blockage.

48. Can septoplasty treat nasal injury deformity?

Yes, if the septum is affected.

49. Is septoplasty better than nasal sprays?

For structural blockage, surgery provides permanent relief.

50. Why consult an ENT specialist for septoplasty?

An experienced specialist ensures safe surgery and better breathing results.

OPHTHALMOLOGY

1. What is Ophthalmology?

Ophthalmology is the medical specialty that deals with eye diseases, vision problems, and eye surgeries.

2. Who is an Ophthalmologist?

An ophthalmologist is a medical doctor trained to treat eye conditions and perform eye surgeries.

3. What is LASIK?

LASIK is a laser procedure that corrects vision problems like near-sightedness, far-sightedness, and astigmatism.

4. Is LASIK permanent?

Yes, LASIK permanently reshapes the cornea, but natural aging changes can still affect vision later.

5. Is LASIK painful?

No, it is usually painless. Numbing drops are used, and patients may feel mild pressure only.

6. Who is eligible for LASIK?

People above 18 years with stable eye power and healthy corneas.

7. What is Cataract?

Cataract is clouding of the natural eye lens, causing blurred vision.

8. What causes Cataract?

Aging is the most common cause. Diabetes, injury, and long-term steroid use can also cause it.

9. How is Cataract treated?

It is treated by removing the cloudy lens and replacing it with an artificial lens (IOL).

10. Is Cataract surgery safe?

Yes, it is one of the safest and most common surgeries worldwide.

11. What is Squint (Strabismus)?

Squint is a condition where both eyes do not look in the same direction.

12. Can Squint be corrected?

Yes, through glasses, exercises, or surgery depending on severity.

13. What is Glaucoma?

Glaucoma is damage to the optic nerve due to high eye pressure.

14. Is Glaucoma curable?
Damage cannot be reversed, but treatment can stop further progression.

15. What are symptoms of Glaucoma?
Often no early symptoms. Later stages may cause vision loss.

16. What is Retina?
The retina is the light-sensitive layer at the back of the eye that helps in vision.

17. What is Retinal Detachment?
It is when the retina separates from its normal position, causing vision loss.

18. Is Retinal Detachment an emergency?
Yes, it requires urgent treatment.

19. What is Diabetic Retinopathy?
Eye damage caused by long-term diabetes.

20. Can diabetes affect eyesight?
Yes, uncontrolled diabetes can cause blindness.

21. What is Dry Eye?
A condition where eyes do not produce enough tears.

22. What causes Dry Eye?
Screen use, aging, environment, hormonal changes.

23. How is Dry Eye treated?
Artificial tears, eye drops, lifestyle changes.

24. What is Conjunctivitis?
Also called pink eye; infection or allergy of eye surface.

25. Is Conjunctivitis contagious?
Yes, viral and bacterial types are contagious.

26. What is Astigmatism?
Irregular shape of cornea causing blurred vision.

27. What is Myopia?
Near-sightedness; distant objects appear blurry.

28. What is Hypermetropia?
Far-sightedness; near objects appear blurry.

30. How long does Cataract surgery take?
Usually 15–30 minutes.

31. What is Smile LASIK?
Advanced laser technique with smaller incision.

32. Is Smile better than LASIK?
It may cause less dryness and faster recovery in some patients.

33. What is Keratoconus?
Progressive thinning of cornea.

34. Can Keratoconus be treated?
Yes, with corneal cross-linking or transplant.

35. What is Corneal Transplant?
Replacement of damaged cornea with donor tissue.

36. What is Macular Degeneration?
Age-related damage to central retina.

37. Can Macular Degeneration cause blindness?
It affects central vision but usually not complete blindness.

38. What is Eye Pressure?
Fluid pressure inside the eye.

39. What is Pediatric Ophthalmology?
Eye treatment for children.

40. Can children get Cataract?
Yes, congenital cataract can occur.

41. What is Amblyopia?
Lazy eye; reduced vision in one eye during childhood.
42. Can Lazy Eye be treated?
Yes, early treatment gives better results.
43. What is Eye Floaters?
Small moving spots in vision.
44. Are Floaters dangerous?
Usually harmless, but sudden increase needs check-up.
45. What is Pterygium?
Fleshy growth on eye surface.
46. Can Pterygium need surgery?
Yes, if it affects vision.
47. How often should eye check-up be done?
Every 1–2 years, or yearly for diabetics.
48. Is screen time harmful?
Excess screen time causes dryness and strain.
49. When should I see an eye doctor?
If blurred vision, pain, redness, or sudden vision loss occurs.
50. Can most eye problems be treated?
Yes, early diagnosis improves outcomes significantly.
51. What is PRK surgery?
PRK is another type of laser vision correction procedure.
52. What are symptoms of cataract?
Blurred vision, glare, poor night vision, and faded colors.
52. What is phaco surgery?
Phacoemulsification is a modern, stitch-less cataract surgery technique.
53. What is IOL?
IOL (Intraocular Lens) is the artificial lens implanted during cataract surgery.
54. What are symptoms of retinal detachment?
Sudden flashes, floaters, or a curtain-like shadow in vision.
55. What is refractive error?
Vision problems like near-sightedness or far-sightedness.
56. Can children have eye problems?
Yes, children can have refractive errors, squint, or lazy eye.
57. What is eye allergy?
Itching and redness caused by allergens.
58. What is eye pressure test?
A test to measure pressure inside the eye.
59. What is computer vision syndrome?
Eye strain caused by prolonged screen use.
60. What is LASIK recovery time?
Most patients recover within a few days.
61. Can cataract come back?
No, but sometimes a secondary membrane may develop, which is treatable.
62. Is cataract surgery painful?
No, it is usually painless under local anesthesia.
63. Can glaucoma cause blindness?
Yes, if untreated, it can lead to permanent vision loss.
64. What is night blindness?
Difficulty seeing in low light conditions.
65. What are eye injuries?
Damage caused by trauma or accidents.
66. Can eye infections be serious?

Yes, untreated infections can affect vision.

67. What are contact lenses?

Medical lenses worn directly on the eye surface.

68. Is eye surgery safe?

Yes, most modern eye surgeries are safe and effective.

69. Why is regular eye examination important?

Early detection prevents serious vision problems and protects eyesight.

AESTHETIC & COSMETIC SURGERY

1. What is cosmetic surgery?

Cosmetic surgery includes procedures that improve appearance, body shape, and facial features.

2. Is cosmetic surgery safe?

Yes, when performed by qualified surgeons in proper medical facilities.

3. What is Rhinoplasty?

Rhinoplasty is surgery to reshape or resize the nose for cosmetic or breathing improvement.

4. How long does Rhinoplasty recovery take?

Initial recovery takes about 1–2 weeks. Final shape may take several months.

5. Is Rhinoplasty painful?

Pain is usually mild and controlled with medicines.

6. What is Gynecomastia?

Gynecomastia is enlargement of male breast tissue.

7. What causes Gynecomastia?

Hormonal imbalance, obesity, certain medications, or genetics.

8. How is Gynecomastia treated?

Surgery using liposuction, gland removal, or both.

9. Is Gynecomastia surgery permanent?

Yes, results are long-lasting if weight remains stable.

10. What is Lipoma?

Lipoma is a harmless fatty lump under the skin.

11. Does Lipoma need surgery?

Only if painful, growing, or cosmetically concerning.

12. What is Liposuction?

A procedure that removes stubborn fat deposits.

13. Is Liposuction for weight loss?

No, it is for body contouring, not weight reduction.

14. What is Tummy Tuck?

Surgery to remove excess abdominal skin and tighten muscles.

15. Who needs a Tummy Tuck?

Patients with loose skin after pregnancy or weight loss.

16. What is Breast Augmentation?

Surgery to increase breast size using implants or fat transfer.

17. What is Breast Reduction?

Surgery to reduce large breasts causing discomfort.

18. What is Breast Lift?

Procedure to lift sagging breasts.

19. What is Face Lift?

Surgery to reduce wrinkles and tighten facial skin.

20. What is Neck Lift?

Improves loose skin and fat under the chin and neck.

21. What is Blepharoplasty?

Eyelid surgery to remove extra skin or fat.

22. What is Botox?

An injection that relaxes muscles to reduce wrinkles.

23. How long does Botox last?
Usually 4–6 months.

24. What are Dermal Fillers?
Injections that restore facial volume and smooth wrinkles.

25. How long do fillers last?
6–18 months depending on type.

26. What is Chin Augmentation?
Procedure to improve chin shape using implants or fillers.

27. What is Jawline Contouring?
Enhancing jaw definition surgically or with fillers.

28. What is Double Chin surgery?
Removal of fat under the chin.

29. What is Hair Transplant?
Transferring hair follicles to bald areas.

30. Is Hair Transplant permanent?
Yes, transplanted hair usually lasts lifelong.

31. What is PRP therapy?
Treatment using patient's own blood platelets to stimulate hair or skin healing.

32. What is Laser Skin Resurfacing?
Laser treatment to improve skin texture and scars.

33. What is Chemical Peel?
Skin treatment that removes damaged outer layer.

34. Are cosmetic surgeries painful?
Most procedures involve mild discomfort only.

35. What type of anesthesia is used?
Local or general anesthesia depending on procedure.

36. How long is hospital stay?
Minor procedures are day-care; major may require 1 day.

37. Are scars visible?
Incisions are placed in hidden areas to reduce visible scars.

38. When can I return to work?
Usually within 3–10 days depending on surgery.

39. What are risks of cosmetic surgery?
Swelling, bruising, infection (rare), temporary numbness.

40. Can men undergo cosmetic surgery?
Yes, many procedures are common in men.

41. Is Liposuction permanent?
Yes, removed fat cells do not return, but weight gain can affect results.

42. What is Fat Grafting?
Transfer of body fat to enhance volume in other areas.

43. Can procedures be combined?
Yes, if medically safe.

44. What is Scar Revision?
Procedure to improve appearance of scars.

45. Is cosmetic surgery expensive?
Cost depends on procedure type and hospital.

46. Is EMI available for cosmetic procedures?
Many centers provide EMI options.

47. What is Non-surgical facelift?
Use of fillers, threads, or Botox to lift skin.

48. Are results natural?
When done properly, results look natural and balanced.

49. How to prepare for cosmetic surgery?
Stop smoking, follow doctor instructions, avoid blood thinners.
50. Who is the ideal candidate for cosmetic surgery?
Healthy individuals with realistic expectations.
